

Informed consent – speech data

Information about the task

Many thanks for taking part. The goal of this study is to record how Dinka is spoken. Your task is to pronounce certain Dinka sentences. In order to compare the pronunciation of different speakers of different dialects we want to record exactly the same sentences from a group of speakers. The sentences are very similar.

Please speak in a natural manner, as when talking with somebody. Ideally, somebody who hears one of the recorded sentences would believe that it was spoken spontaneously.

Consent form

I, MR. Manasseh Mater Makon, agree to participate in this recording session on Dinka. I understand that these speech data are collected in order to study the language. I also understand that the results will be made public – in journals, books, and other forms, including via the internet. I give consent for the recordings of my voice to be made public in an electronic resource on the Dinka language. This research is being conducted by Bert Remijsen (University of Edinburgh) in collaboration with Peter Madak Aguel Rng

I understand that the recording may take up to two hours. Upon completion, I will receive for each half hour.

I also understand that I can stop at any point.

In any kind of publication based on these data, I would / would not prefer for my name to be disclosed [please cross out what does not apply].
